## **Nature's Secret** Foliar Leaf Spray For houseplants, gardens and shrubs

### **Directions**

**Apply a light mist weekly to all foliage. Excess spray or run-off is a waste of product.**

**More frequent applications may be needed for plants under severe stress.**

**Mist at least 2 hours before transplanting.**

**For new plants, wait for second or third leaf.**

**Excess use may cause tips of some leaves to burn. If this happens, reduce frequency of application.**

**Do not mix with any chemicals**

Nature's Secret contains a special group of organic complexes, vitamins and minerals which synergistically stimulate growth, root development and flowering. It is called a plant energizer because it triggers various metabolic responses when applied to the foliage of plants.

Nature's Secret also contains trace amounts of the essential nutrients required for plant growth. These nutrients have been chelated and complexed to keep them in a useable form for efficient translocation and utilization by the plant. However, this formula is not intended as a total plant food source.

Nature's Secret combats the effects of stress and lack of vigour caused by poor growing conditions. This is very important for all plants that do not have optimum growing conditions.

### **Benefits of Nature's Secret**

- Increased vegetative growth
- Improved plant vigour
- Richer and deeper colour
- Improved blossoming and seed set
- Increased nutrient uptake and stimulation
- Earlier maturity
- Greater efficiency of water use and transpiration
- Helps prevent wilting
- Increased drought tolerance
- Improved frost tolerance
- Withstands wider range of temperature and light
- Better produce quality

### **Nature's Secret is environmentally friendly, safe and easy to use.**

Due to the many different species of plants and the many variables that effect their growth, to achieve optimum performance experiment by adjusting the timing, amounts or frequency of application.
